PROJECTS

• ACC – Redberries (Software AG)

Redberries is a career page that created to display job vacancy information. Job seekers will go straight to the careers page to learn about the company in question and work life there.

• ACC – SMI Web Career (Laravel)

SMI Web Career is a way to showcase the company brand, communicate the company values, tell employee stories, and post open jobs. Career sites are used in recruitment marketing strategies to build employer brands and engage candidates.

• ACC – Gasfin (Laravel)

Web governance that referred to as digital governance, is defined as the process of maintaining and managing an online presence. The idea is to uphold the website to certain standards, whether that's on own organization's standards or following regulations or compliance standards, such as web accessibility standards.

• Tamakochi (ReactJs)

Tamakochi is an NFT Game website. NFT game is a platform where NFTs are displayed and traded. In conclusion, the NFT marketplace is an NFT market or site that works like Amazon or eBay to sell or buy various goods, but focuses on NFT products.

- **Aisyyah Elementary School Company Profile (Laravel)**

Company profile that serves to introduce the Aisyyah Elementary School. In addition, this company profile can be said to be a written introduction containing information about the history of the company, vision, mission, values, business goals, products, and various other facts regarding professional reputation in the education world.

- **SMF – Whistle Blowing System (Laravel)**

The Whistleblowing System (WBS) is a reporting mechanism for specific criminal acts that have happened or will happen involving employees and other individuals within the company where they work, provided that the reporter is not involved in the crime being reported.

- **SMF – Sharia Accounting System (ExpressJs + VueJs)**

Sharia accounting is a subsystem of the Islamic economic and financial system. It serves as a management tool to disseminate information to both internal and external parties of the company and is utilized as a supporting tool for the application of Islamic values in the field of accounting.

- **SMF – Risk Register (Golang + VueJs)**

A risk register application is a tool used to identify, assess, and manage risks within a project, organization, or business activity. It serves as a central repository for documenting potential risks, including their descriptions, likelihood, impact, mitigation strategies, risk owners, and current status. The application helps prioritize risks based on their severity, facilitates the development of response plans, and enables ongoing monitoring and reporting to ensure that risks are effectively managed to prevent negative outcomes.

- **SMF – Loan Origination System (Golang + NextJs)**

Loan Original System is a digital application that simplifies loan application, approval, and management for financial institutions, offering efficient handling of customer data, credit evaluation, and fund disbursement, while enhancing transparency and reducing processing time.

- **SMF – Helpdesk IT (VueJs + NestJs)**

The Helpdesk IT project is a ticketing system that helps IT teams manage, track, and resolve support requests efficiently. It features ticket creation, status tracking, escalations, and automated notifications, with integrations for faster response and resolution.
